PROFILE SUMMARY

Results-driven Analytics Engineer with 5+ years of experience designing scalable data warehouse architectures, building reliable ELT pipelines, and delivering trusted analytical data products across high-volume financial services environments. Proven track record of reducing compute costs by 28%, improving pipeline uptime to 99.8%, and cutting downstream reporting errors by 45% through automated data quality frameworks.

Expert in Snowflake, dbt, SQL, and Python with deep hands-on experience in dimensional and Data Vault modelling, domain-level data architecture (conceptual through physical), and workflow orchestration. Passionate about data governance, technical stewardship, and empowering cross-functional teams to make confident, data-driven decisions at scale.

CORE COMPETENCIES

Data Warehousing & Architecture | Snowflake & Cloud Data Platforms | Dimensional & Data Vault Modelling
ELT/ETL Pipeline Development | dbt & SQL Transformation | PySpark & Snowpark Processing
Data Quality & Observability | Data Governance & Stewardship | Workflow Orchestration
Business Intelligence & Visualization | Data Product Development | Agile Delivery (Azure DevOps, Jira)

TECHNICAL SKILLS

Data Platforms: Snowflake, Azure, PostgreSQL, MySQL, On-Premises Servers

Transformation & Engineering: dbt, SQL, Python, PySpark, Snowpark, Jupyter Notebook, Google Colab

BI & Visualization: Power BI (DAX, SSRS), Tableau, Looker Studio, Excel

Analytics & Monitoring: Google Analytics, Fullstory, Power Automate

Collaboration & Delivery: Azure DevOps, Jira, Git, PowerPoint

PROFESSIONAL EXPERIENCE

Analytics (Data) Engineer – JadaSquad

2024 – Present

- Architected and deployed scalable Snowflake data warehouse pipelines processing 10M+ financial transactions monthly, achieving 99.8% pipeline uptime through proactive monitoring and performance tuning.
- Engineered curated, reusable analytical data marts using dimensional modelling (star schema with fact and dimension tables), eliminating 45% of ad-hoc query requests across business units.
- Unified disparate transactional, customer, and risk datasets into governed data products, establishing a single source of truth for 15+ business-critical metrics.
- Implemented automated data quality validation and anomaly detection checks using dbt tests and custom macros, reducing downstream reporting errors by 45%.
- Optimised Snowflake compute costs by 28% through query refactoring, strategic clustering, and workload management policies, saving an estimated £40K+ annually.
- Designed and developed robust, version-controlled data models and transformation pipelines using dbt and SQL, improving data reliability and accessibility across 5+ cross-functional teams.
- Built and optimised ETL/ELT workflows with PySpark and Snowpark, enabling near-real-time processing of large-scale structured transactional data.
- Partnered with data scientists, product managers, and business stakeholders to translate complex requirements into efficient data solutions, accelerating time-to-insight by 35%.
- Led root cause analysis and technical resolution of production data incidents, communicating remediation plans to engineering and business stakeholders within SLA timelines.
- Co-designed domain-level data architecture from conceptual modelling through to physical implementation in the warehouse, aligning with enterprise data governance standards.

Senior Data Analyst – RemotePass

2024

Strategic data partner within a global HRTech platform supporting international hiring and payroll operations.

- Partnered with C-level stakeholders across Operations, Product, Finance, and Marketing to define and prioritise a portfolio of 20+ data initiatives aligned to company OKRs.

- Standardised business-critical KPIs by developing governed metric layers in LookML and SQL, increasing cross-departmental reporting consistency by 50%.
- Defined and tracked dashboard adoption metrics, driving a 40% increase in active stakeholder usage within 6 months through targeted enablement sessions.
- Built reusable analytical datasets enabling self-serve analytics for 3 departments, reducing manual reporting effort by 60% and freeing 15+ analyst hours weekly.
- Designed enterprise KPI frameworks covering global hiring lifecycle, onboarding efficiency, payroll accuracy, and compliance performance.
- Led cross-functional delivery of high-impact dashboards in Power BI, Tableau, and Looker Studio, coordinating between analysts, engineers, and product owners.
- Consolidated fragmented reporting across HubSpot, GTM4, and internal systems into a governed single source of truth, eliminating 50% of reporting inconsistencies.
- Delivered executive-level insight presentations that directly influenced strategic decisions, improving onboarding speed by 22% and customer retention by 18%.
- Championed data governance standards, elevating data quality accuracy rates from 87% to 97% across production datasets.
- Introduced a prioritisation framework based on business value and feasibility scoring, reducing low-impact reporting requests by 30%.

Senior Data Analyst – eTranzact International Plc

2020 – 2024

Core analytics partner to executive management in a financial services firm processing high-volume digital payments.

- Developed enterprise reporting frameworks using Power BI and SQL, increasing executive visibility into performance metrics by 60% and enabling data-driven strategic planning.
- Engineered automated reporting solutions that eliminated 50% of manual reporting effort, reclaiming 20+ hours per month for the analytics team.
- Designed and implemented dimensional data models that improved operational efficiency and directly supported double-digit revenue growth in key business segments.
- Delivered commercial performance analyses and actionable data-driven recommendations to senior leadership, contributing to measurable business performance improvement.
- Collaborated with cross-functional teams to optimise data processing pipelines using Snowflake, dbt, Python, MySQL, and SQL, ensuring seamless data ingestion and model accuracy.
- Built statistical models and inferential analysis frameworks for scenario planning, assisting department leads in strategic forecasting and resource allocation.
- Tracked and analysed user behavioural data across web and mobile applications using Google Analytics and Fullstory, generating insights that improved product engagement.
- Recognised by the MD/CEO of eTranzact as the most innovative and highest-performing employee for 2021.

Data Analyst – Research Assistant – Lagos Business School

2019 – 2020

Supported an Econometrics Associate Professor with large-scale data analysis and geospatial research projects.

- Analysed a large-scale demographic and crime rate dataset for South Africa, producing compelling data visualisations that revealed actionable patterns for academic publication.
- Automated geolocation data extraction using Python geocoding scripts, reducing manual data collection time by 70% across multiple research projects.
- Developed a COVID-19 impact dashboard for Nigeria using Power BI, incorporating sentiment analysis of public response to the pandemic, presented to university research faculty.
- Prepared comprehensive statistical documentation including analysis plans and stand-alone reports for peer-reviewed research submissions.

EDUCATION

MSc Data Science – University of Salford, Manchester

2026

BSc Geology – University of Nigeria, Nsukka

2018

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900)

Mar 2024

Microsoft Certified: Power Platform Fundamentals (PL-900)

Apr 2024

Microsoft Certified: Data Analyst Associate (PL-300)

Dec 2021

Python for Data Analysis and Science – Dataquest Lab, Inc
Data Analytics: SQL and Power BI – Utiva Data Academy
Analysing and Visualising Data with Microsoft Power BI – Microsoft
